

SAI VIBRIONICS CASE HISTORIES FROM NEWSLETTERS September 2010 – June 2013

6. ENDOCRINE SYSTEM – glands (adrenals, ovaries, pancreas, thymus, thyroid, pineal, pituitary, Chakras, Meridians)

6.a. Saving a Diabetic's Foot from Amputation ^{2640....India}

A 54-year old man who had been suffering from diabetes for many years had undergone amputation of all five toes of his right foot. He was hospitalized with the possibility of having his right foot and fore leg up to the knee amputated. A Vibrionics practitioner gave him the following combos in the hope that this could be prevented:

- #1. NM20 Injury + NM25 Shock + NM32 Vein-Piles + SM15 Circulation + SR264 Silicea (200C) + SR293 Gunpowder + SR298 Lachesis (30C) + SR325 Rescue + SR408 Secale Corn (30C)...TDS
- #2. SM17 Diabetes + SM39 Tension + SM41 Uplift...TDS

Fifteen days later, the patient was told by his doctor that he was much better and that there was no need for amputation but he may be required to undergo plastic surgery. The Vibro practitioner asked him to continue taking the remedies. A month later, the patient was discharged from the hospital and told that he did not require plastic surgery. With God's grace, this poor rickshaw puller was able to continue his profession and provide for his family. The entire treatment took 45 days.

As the 108CC box was not available at the time, the healer used a Vibrionics potentiser for preparing the remedies. Had the healer used the 108CC box, the following could have been given instead and we believe with equal success:

CC3.7 Varicose Veins + CC21.11 Abscess + CC6.3 Diabetes...TDS

6.b. Hypothyroidism ^{00600J...India}

A man, aged 27, came to see the practitioner because he had been suffering from hypothyroidism since childhood. His symptoms were that he appeared lazy though, in fact, he was just lacking in energy. He was losing a lot of hair, his face was swollen, he was chronically anemic and he suffered from lack of sleep due to nightmares. Intermittent allopathic treatment had been given during the last 12-15 years but without any substantial improvement and recently the condition seemed to be getting worse. The practitioner gave the following:

CC3.1 Heart tonic + CC12.1 Adult tonic + CC15.1 Mental & Emotional tonic + CC18.1 Brain & Memory tonic...TDS.

One month later the patient showed some improvement. The nightmares had stopped and he could sleep well. The medicine was changed to:

CC3.1 Heart tonic + CC6.2 Hypothyroidism + CC12.1 Adult tonic + CC15.1 Mental & Emotional tonic...TDS.

Two months later there was 50% improvement. Treatment continued with the same remedy and a further two months on, the patient had improved 95%. After another couple of months, with God's grace, he was fully restored to good health.

*This is a wonderful healing of a person who suffered from hypothyroidism for most of his life. Had he been given **CC6.2 Hypothyroidism** in the first prescription – perhaps, then, the healing could have been even faster.*

*However, to have given **CC18.1 Brain & Memory tonic** was a good decision and must have helped significantly towards the patient's recovery. As the patient had this problem for many years, we are sure the practitioner is keeping a careful check on the thyroid in order to avoid a relapse. The patient needs to continue with **CC6.2 Hypothyroidism** OD to keep the thyroid healthy and in balance for some considerable time, possibly ongoing.*

6.c. Diabetes Mellitus Type 2 ^{2786...Russia}

The patient is a 58-year old woman who had diabetes type 2 for 9 years. She was an emotional overweight woman in a bad state of health with a lot of stress and no energy. She was being treated allopathically for diabetes with Byetta and Glucovance. Her blood sugar level was 10 units whereas the normal value is 5.5 units.

She was given:

#1) CC12.1 Adult tonic + CC15.4 Eating disorders + CC18.1 Brain disabilities...TDS.

#2) CC6.3 Diabetes...TDS.

In two weeks, her health was better and she had much more energy. The sugar level had decreased slightly. In a further ten days, the sugar level had decreased to 9 units.

#2) was replaced by the following combo, using the Sai Ram Potentiser:

#3) SM17 Diabetes + SM4 Stabilising + SM39 Tension...OD for the 1st week, then TDS.

In another one week, the sugar level had decreased to normal 5.5 units and the patient began reduction of the allopathic dose. Further information is absent because the patient returned to her home country but the practitioners are hopeful that the outlook for this patient is recovery from diabetes and a new lease of life.

For those practitioners with a Sai Ram Potentiser the following could have been given: for tonic: NM63 Back-up + NM75 Debility; for eating disorders: BR9 Digestion + SR280 Calc Carb (30C) + SR319 Thyroid Gland + SR341 Alfalfa + SR498 Hypothalamus + SR530 Stomach + SR572 Obesity; for stress: NM6 Calming + NM37 Acidity + BR2 Blood Sugar + BR4 Fear + BR6 Hysteria + BR7 Stress + SM1 Removal of Entities + SM2 Divine Protection + SM4 Stabilising + SM5 Peace & Love Alignment + SM6 Stress + SM39 Tension; for diabetes: NM21 KBS + NM74 Diabetes + OM8 Hypo & Hyperglycaemia + OM9 Digestive Psychosomatic + BR2 Blood Sugar + SM41 Uplift + SR302 Nux Vom + SR305 Pancreatin + SR319 Thyroid Gland + SR320 Thyroidinum + SR499 Insulin + SR568 Hypothyroidism.

6.d. Hypothyroid ^{2799...UK}

When this practitioner was in Sierra Leone, a woman doctor who came with the allopathic team from UK, saw her give Vibrionics treatment to people there. On her return, the doctor contacted the practitioner to ask if Vibrionics could help her under-active thyroid. She had a hypothyroid for 5 years and since then she had been taking 50 mg of thyroxin daily. As she lived a long way from the practitioner, she was sent the following combo by post:

SR308 Pituitary Gland + SR319 Thyroid Gland + SR521 Pineal Gland + SR568 Hypothyroidism + CC15.1 Mental & Emotional tonic...TDS

Two months later, she went for a blood test. Her thyroid function was almost normal and so, her doctor has reduced the thyroxin to 25 mg. She is continuing to take the above combo.

6.e. Diabetes ^{2640...India}

A medical doctor, aged 67 years, working for an ESIS hospital was advised to undergo cataract surgery. But his blood sugar levels were not within the acceptable limits in spite of the fact he was on insulin for a long time. Since the operation was urgently required, he came for help and was put on the following vibro combination.

CC6.3 Diabetes...BD

Within a week, he called up to say that he had undergone the cataract surgery and that he was happy that vibro pills brought his sugar levels under control. He was then given: **CC12.1 Adult tonic...TDS**

6.f. Diabetes with High BP ^{01423J...India}

A 49 year old male patient was diagnosed with diabetes a year before he saw the practitioner. He also had high blood pressure and high cholesterol. He was given:

CC3.3 High Blood Pressure + CC3.5 Arteriosclerosis + CC6.3 Diabetes...TDS.

On a regular self-monitoring over a period of a few weeks, there was no change. However, what did come to light was that the patient's liver was also ailing and had problems; so

CC4.2 Liver and Gallbladder tonic was added to the above. It was after this that the patient started to feel better. The continuing self-monitoring revealed that the patient's blood sugar became almost normal. Two months later, clinical tests showed that blood pressure was normal at 120/80 and cholesterol level was reduced. The family doctor remarked to the patient "You are almost a nondiabetic!" and asked the patient whether he was taking some alternative treatment. The allopathic medicine has been much reduced and Vibronics treatment continues with the same combo.
