

## Cured-Jaw Bone Deterioration Due to Radiation Therapy

Due to a radiation therapy used to treat a cancer in my neck in 2006, a bone disease appeared in my jaw on May of 2012. During a visit at the University of Texas, MD Anderson Cancer Center, USA, I was treated for the second occurrence of cancer, in June of 2012. To solve the problem, they decided to remove a piece of the bone in my jaw that was compromised and replace it with a piece of bone extracted from my leg.

I decided not to undergo the procedure indicated by the doctor and instead chose to do Hyperbaric Oxygen treatment that was performed during the months of July and August of 2012. At the same time I started Vibrionics treatment.

On October of 2012, tests at MD Anderson showed that the piece of dead bone was no longer attached to the jaw bone which, according to the doctor was a good thing.

In about two to three months after my visit to MD Anderson the piece of bone was expelled from my jaw through the gum. During this period I had continued the Vibrionics treatment.

On July of 2013, during a checkup at MD Anderson, I was told that everything was OK with my jaw bone. Contrary to what the doctor wanted which was surgery, I decided on Hyperbaric Oxygen and Vibrionics and the problem was solved.

By the way, when the (neck) cancer came back on January of 2008, I was told that it was incurable. On July 30, 2008, while in Puttaparthi, India, Sai Baba came to my dream and told me that my cancer was a thing of the past. Two months later the tests showed no sign of the cancer and so did the tests on July, 2013, five years later.
