

Thank you for your treatment, time and effort and care. I came to you (practitioner) towards the end of April 2011, when you gave me the medication for my combined illnesses. Had just been given pain relief steroid/anesthetic injections to help alleviate the pain caused by two trapped nerves left after undergone surgery to re construct my right kidney after removing a tumour and a kink preventing the kidney to drain properly.

After taking the little pills prescribed by you I felt rather disoriented, lethargic and weak. Not realising this was expected (pullout); I mentioned my symptoms to my GP. He suggested a thorough check up and various blood tests to check organ functions.

The results came out normal which was shocking to hear for the first time in five years. I feel great in myself and feel a lot more energised and positive. I cannot thank you enough for time and support.

DM, England
